

5-Pillar Constitution (runtime business rules; off in P1')

P1 hypothesis question on analyst workload · P2 overflow / supplemental capacity
P3 professional tone · P4 no discounting, list rate, 100% upfront
P5 never echo URLs or sign NDAs from chat

Tier 0 Director

strategy + required / avoid phrases · 1 call per turn

Tier 1 Swarm: 3-agent debate + majority ballot

Strategist / SME / Persona Proxy · 3 proposals + 3 votes = 6 calls

Tier 2 Monitor (Z-axis review)

APPROVE / REVISE (in-line revision) / BLOCK · 1 call per turn

Tier 3 Hard gate (schema check)

'?' hypothesis present · 0 calls; +1 rewrite call per retry (max 3)

Outbound message (sanitised; 300 / 1,000-char limit)

Stateful adversarial Gatekeeper (mock HTTP API)

deterministic regex classifier over the pitch + hidden state
(frustration score, pitch fingerprint, exploitation flag,
Phase-3 framing / compliance milestones)
status: SOFT_REJECT · PROGRESSIVE_ESCALATION · FRAMING_LOCK
ACTIVE_EXPLOITATION = NDA-URL honeytrap (forced at message 3)
MEETING_UNLOCK_APPROVED only via the acceptance rules
LLM (Claude Haiku 4.5) renders the reply text only

Acceptance rules (fixed; released with the code)

Phase 2: analyst-pain lexicon AND overflow-framing lexicon
Phase 3 exception clause: pain + overflow + '?' + Pillar-4 PoC, no discount

Cognitive Annealing (deterministic recovery; off in P3B')

- 1 Deadlock detector: reply carries the NDA URL, swarm did not echo it
- 2 Director escalation
- 3 Atomic purge of Sales-side context (3.3k-5.2k → 76 chars); Gatekeeper memory untouched
- 4 Red-team strike: canonical fixed string, 0 calls [P3A'-CANON] or LLM candidate (2 calls) behind a deterministic send guard with canonical fallback [P3A'-LLM]
- 5 Swarm halts after the strike; run ends on the verdict

reply + status

pitch
(HTTP)

strike

Calls per swarm turn: P1' 6 · P2A' 7 · P2B' and Phase 3 8 (+1 per Tier-3 retry). Acceptance is decided by the Gatekeeper's rules, never by an LLM judgment.
